# Introduction

Welcome to Kramer Electronics! Since 1981, Kramer Electronics has been providing a world of unique, creative, and affordable solutions to the vast range of problems that confront the video, audio, presentation, and broadcasting professional on a daily basis. In recent years, we have redesigned and upgraded most of our line, making the best even better!

# **Getting Started**

We recommend that you:

- Unpack the equipment carefully and save the original box and packaging materials for possible future shipment.
- Review the contents of this user manual.

Go to <u>www.kramerav.com/downloads/SWT3-31-HU</u> to check for up-to-date user manuals, application programs, and to check if firmware upgrades are available (where appropriate).

### **Achieving Best Performance**

- Use only good quality connection cables (we recommend Kramer high-performance, high-resolution cables) to avoid interference, deterioration in signal quality due to poor matching, and elevated noise levels (often associated with low quality cables).
- Do not secure the cables in tight bundles or roll the slack into tight coils.
- Avoid interference from neighboring electrical appliances that may adversely influence signal quality.
- Position your Kramer SWT3-31-HU away from moisture, excessive sunlight and dust.

### **Safety Instructions**

#### Caution:

- This equipment is to be used only inside a building. It may only be connected to other equipment that is installed inside a building.
- For products with relay terminals and GPI\O ports, please refer to the permitted rating for an external connection, located next to the terminal or in the User Manual.
- There are no operator serviceable parts inside the unit.

#### Warning:

- Use only the power cord that is supplied with the unit.
- To ensure continuous risk protection, replace fuses only according to the rating specified on the product label which is located on the bottom of the unit.

#### **Recycling Kramer Products**

The Waste Electrical and Electronic Equipment (WEEE) Directive 2002/96/EC aims to reduce the amount of WEEE sent for disposal to landfill or incineration by requiring it to be collected and recycled. To comply with the WEEE Directive, Kramer Electronics has made arrangements with the European Advanced Recycling Network (EARN) and will cover any costs of treatment, recycling and recovery of waste Kramer Electronics branded equipment on arrival at the EARN facility. For details of Kramer's recycling arrangements in your particular country go to our recycling pages at <a href="https://www.kramerav.com/il/quality/environment">www.kramerav.com/il/quality/environment</a>.

### **Overview**

Congratulations on purchasing your Kramer **SWT3-31-HU 3x1 4K60 USB-C/HDMI Switcher**. **SWT3-31-HU** is a high-performance auto-switcher with one USB-C and two HDMI/USB inputs and HDMI output. The connected USB peripherals, such as a room camera and microphone, are switchable for use of the active USB host, for convenient hybrid meeting operation with both room and online participants.

**SWT3-31-HU** provides exceptional quality, advanced and user-friendly operation, and flexible control.

### **Exceptional Quality**

- Hybrid-meeting Collaborative Switching Controllable coupled-signals switching of both AV and USB host inputs, for concurrent connection with AV output and space USB devices, allows collaborative hybrid meeting where multiple meeting participants are switched to share their content with both room and online meeting participants.
- HDMI Signal Switching 4K60 4:4:4 HDMI resolution and HDCP 2.3 compliant, supporting deep color, x.v.Color™, CEC, HDMI uncompressed audio channels, Dolby TrueHD, DTS-HD, 2K, 4K, and 3D as specified in HDMI 2.0.
- USB 3.2 Switching USB 3.2 signals switching, enables high data-rate connection between active USB host and space USB devices, such as 4K camera, high-quality audio devices, and HID (Human Interface Devices) mouse or keyboard devices.
- HDMI Mirroring Active USB-C or HDMI input signal is mirrored to loop output port for connecting a local monitor or adding an additional unit in a daisy chain.
- I-EDIDPro<sup>™</sup> Kramer Intelligent EDID Processing<sup>™</sup> Intelligent EDID handling, processing and pass-through algorithm that ensures Plug and Play operation.

#### **Advanced and User-friendly Operation**

- BYOD Ease and Convenience Connect any DP-Alt-Mode-capable USB-C device as an AV presentation source, while providing the connected device with USB 2.0 and Ethernet connection, and (if PD-2.0-capable) up to 60 watts of power, via a single USB-C cable connection only.
- Auto Switcher Ease of Use Automatically plays signal of the plugged source on the connected display, according to user-configured preferences, such as last-connected input.

- Display Power On/Off Control with Ease: Simply press the DISPLAY ON button to toggle on / off the power of the connected CEC-enabled display. The button's LED indicator shows you whether the display is currently powered on / off.
- Simple Control Remote IP-controller connection, browser operation webpage, local panel buttons, or remotely connected contact-closure buttons, for easy and fully flexible user ports selection, signals routing, and switcher control.
- Comprehensive Management Local panel status LED, remote IP-driven firmware upgrade and management via user-friendly embedded web pages, and remote IP or local serial service and management via API commands and responses communication, for flexible service options and ensure lasting, field proven deployment.

### **Flexible Connectivity**

- Easy Online Meeting System Integrated Connectivity Built-in flexible autodisconnection operation of USB devices, such as room cameras and soundbars, enable detection of BYOD presenter disconnection by online meeting systems for their autoactivation, convenient integration, and ease of end-user operation according to space changing hybrid sessions needs.
- Built-in Intelligent Control Gateway Remote IP-driven intelligent control of connected AV, USB and sensor devices via CEC, RS-232, IR or I/O. Eliminating the need for an external control gateway, this feature reduces installation complexity and costs, to enable easy integration with control systems, such as Kramer Control.
- Secured Network Connection Standard IT-grade 802.1x authentication for secured IT LAN connectivity.
- HDMI Mirroring Active USB-C or HDMI input signal is mirrored to loop output port for connecting a local monitor or adding an additional unit in a daisy chain.
- Audio De-embedding The digital audio signal passing-through to the output, is deembedded, converted to an analog signal and sent to the stereo balanced analog audio output. This enables playing the audio on a locally connected professional audio system (such as DSP) and speakers, in parallel to playing it on the speakers connected to the AV acceptor device (such as TVs with speakers).
- Easy and Elegant Installation PoE powering via LAN port connection, and MegaTOOLS<sup>™</sup> fan-less enclosure for dropped-ceiling mounting, or side-by-side mounting of 2 units in a 1U rack space with the recommended rack adapter, for easy switcher deployment.

# **Typical Applications**

SWT3-31-HU is ideal for the following typical applications:

- Enterprise and education hybrid huddle spaces.
- Hybrid user connection element in advanced hybrid meeting solutions.

### **Controlling your SWT3-31-HU**

Control your SWT3-31-HU directly via the front panel push buttons, or:

- Via the IP commands transmitted by a controller and touch screen system, or a browser using built-in user-friendly Web pages.
- By RS-232 serial commands transmitted by a touch screen system, PC, or a serial controller.

# Defining SWT3-31-HU 3x1 4K60 USB-C/HDMI Switcher

This section defines SWT3-31-HU.

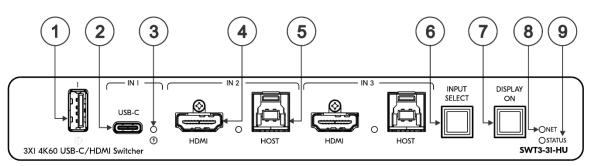

Figure 1: Figure 2: SWT3-31-HU 3x1 4K60 USB-C/HDMI Switcher Front Panel

#	Feature		Function		
1	USB Typ	e A Port	Connect to the USB local devices (for example, a USB PTZ camera).		
2	USB-C IN	1 1 Port	Connect to USB-C AV sources:		
			<ul> <li>that support DisplayPort Alternate Mode, for example, a laptop) to share content.</li> </ul>		
			<ul> <li>to communicate with the USB devices (for example, a PTZ came are connected to the device,</li> </ul>		
			to connect	ct to tl	ne LAN
			• to charge 2.0).	the c	connected sources (that supports USB Power Delivery
			<ul> <li>Make sure to disconnect the USB-C cable from your host device before modifying the USB type, or before performing a factory reset.</li> <li>After modifying the USB device type via the web, power cycle the unit after the webpage indicates that the process is complete.</li> <li>While charging, the charging icon (to the right of the connector) becomes visible and lights orange.</li> </ul>		
3		LED 1 to 3	LED Status	Indi	cates
	(per input port)		Lights blue	An ii sour	nput is selected and connected with an active AV or USB ce.
			Flashes blue	An ii	nput is selected and has no active AV signal.
		1	Off	An ii	nput is not selected and has an active AV signal.
4	IN Ports	HDMI	Connect to an	HDM	l source.
5	(2 & 3)	HOST USB B 3.2 Connector	Connect to a USB host (for example, a room PC) to communicate with the USB devices (for example, a PTZ camera) connected on this device.		
6	INPUT S	ELECT Button	Press to select an input.		
6 7	DISPLAY	ON Button	Press to turn display On/Off. Button LED lights on sending Display On message. Button LED turns off on sending Display Off message.		
8			LED Status	us Indicates	
_			Lights green		A valid IP address has been acquired.
			Flashes green 60s	for	A means to identify the device in a system, using command #IDV.

#	Feature	Function	Function		
		Flashes green	When the IP mode is set to DHCP, but the unit fails to obtain an IP address through a DHCP server and is assigned a default IP address.		
9	(9)STATUS LEDLED Status		Indicates		
		Not lit	No power detected		
		lights white	PSU-powered on (only). Note: This is applicable when power supply is PoE mode.		
		Lights blue	Power is on and a source is connected.		
		Lights green	Power is on, and a source and an acceptor are connected.		

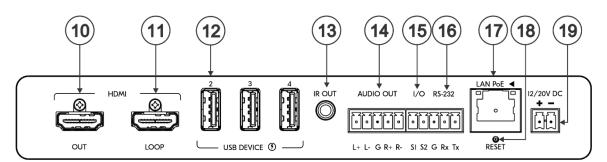

Figure 3: SWT3-31-HU 3x1 4K60 USB-C/HDMI Switcher Front Panel

#	Feature	Function
10	HDMI OUT Connector	Connect to an HDMI acceptor.
(11)	HDMI LOOP Connector	Connect to a local acceptor.
(12)	USB DEVICE Type A Port (2 to 4)	Connect to the USB local devices (for example, a USB camera, a soundbar, microphone and so on).
(13)	IR OUT 3.5mm Mini Jack	Outputs an IR signal, per command from LAN-connected controller (for example, from <b>KC-VB1</b> ), to a connected IR emitter.
14	AUDIO OUT 5-pin Terminal Block Connector	Connect to a balanced stereo analog audio acceptor.
15	I/O 2-pin Terminal Block (S1 to S2)	<ul> <li>Connect to:</li> <li>Input-triggering devices (for example, remote buttons or sensors), OR</li> <li>Output-triggered devices (for example, remote alarm LED indication).</li> <li>These GPIO ports may be configured as a digital input, digital output, or analog input ports.</li> </ul>
16	RS-232 3-pin Terminal Block	Connect to an RS-232 controlled device (for example, the connected PTZ USB camera) to be controlled via an IP-connected controller (for example, <b>SL-240C</b> ).
17	LAN PoE RJ-45 Connector	Connect to LAN. The device accepts power from the LAN port.
18	RESET Recessed Button	For restoring factory default settings, press the RESET button and connect power to device (keep pressing longer than 6sec after power connection)
(19)	12/20V DC Power Connector	Use the included +20V 6A power supply for powering the unit and charging the source device connected to the USB-C port, or For powering the unit, without USB-C charging support, use PoE powering or an optional +12V DC 5A power adapter (purchased separately).

# Mounting SWT3-31-HU

This section provides instructions for mounting **SWT3-31-HU**. Before installing, verify that the environment is within the recommended range:

- Operation temperature  $0^{\circ}$  to  $40^{\circ}$ C (32 to  $104^{\circ}$ F).
- Storage temperature  $-40^{\circ}$  to  $+70^{\circ}$ C (-40 to  $+158^{\circ}$ F).
- Humidity 10% to 90%, RHL non-condensing.

# Caution:

• Mount SWT3-31-HU before connecting any cables or power.

#### Warning:

- Ensure that the environment (e.g., maximum ambient temperature & air flow) is compatible for the device.
- Avoid uneven mechanical loading.
- Appropriate consideration of equipment nameplate ratings should be used for avoiding overloading of the circuits.
- Reliable earthing of rack-mounted equipment should be maintained.
- Maximum mounting height for the device is 2 meters.

#### Mount SWT3-31-HU in a rack:

• Use the recommended rack adapter (see <a href="https://www.kramerav.com/product/SWT3-31-HU">www.kramerav.com/product/SWT3-31-HU</a>).

Mount SWT3-31-HU on a surface using one of the following methods:

- Attach the rubber feet and place the unit on a flat surface.
- Mount the unit in a rack using the recommended rack adapter <u>www.kramerav.com/downloads/SWT3-31-HU</u>.

# **Connecting SWT3-31-HU**

 $(\mathbf{i})$ 

Always switch off the power to each device before connecting it to your **SWT3-31-HU**. After connecting your **SWT3-31-HU**, connect its power and then switch on the power to each device.

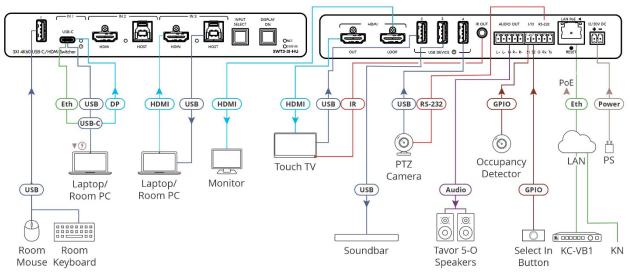

Figure 4: Connecting to the SWT3-31-HU Rear Panel

#### To connect SWT3-31-HU as illustrated in the example in Figure 4:

- Connect a USB-C source (for example, a laptop that supports Display Port Alternate Mode) to the USB-C IN connector 2.
- 2. Connect a source (for example, a room PC) to the IN 2 HDMI ④ and USB Host ⑤ connectors. Same for IN 3.
- 3. Connect the HDMI OUT port (10) to an HDMI acceptor (for example, a touch TV).
- 3. Connect the HDMI LOOP connector (1) to an HDMI acceptor (for example, a local monitor).
- 5. Connect USB DEVICE ports:

USB devices that consume power greater than the power supplied by connected port (see Technical Specifications), should be powered by an external power supply.

- Connect the room keyboard and mouse to the USB 1 type A port 1 on the front panel.
- Connect the touch TV to the USB 2 port (12) on the rear panel.
- Connect a soundbar to the USB 3 port (12) on the rear panel.
- Connect a PTZ camera to the USB 4 port (12) on the rear panel.
- 4. To control the touch TV via IR, connect IR OUT 3.5mm mini jack (13) to an IR emitter cable and attach the cable emitter side to the IR sensor of the touch TV.
- 5. To control the PTZ camera, connect the RS-232 3-pin terminal block connector (16) to the PTZ camera.

6. Connect a room controller (for example, the Kramer KC-VB1) via LAN to the LAN PoE Ethernet RJ-45 port (17).

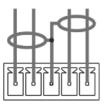

Send from the room controller via LAN:

- IR commands via the room controller to control the smart TV.
- Serial commands to control the camera.
- 7. Connect the AUDIO OUT 5-pin terminal block connector (14) to a balanced stereo audio acceptor (for example, Kramer Tavor 5-O speakers).
- 8. Connect the IO 2-pin terminal block (15):
  - To an occupancy detector.
  - To a selector button.
- 9. Connect LAN connector (17) to IT switch for LAN connection and PoE powering. Optionally, connect the power adapter to SWT3-31-HU (19) and to the mains electricity.

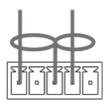

To charge the device that is connected to the USB-C port, you need to use a chargeable power adapter (purchased separately) for powering the SWT3-31-HU switcher.

# **Connecting the Output to a Balanced/Unbalanced Stereo Audio Acceptor**

The following are the pinouts for connecting the output to a balanced or unbalanced stereo audio acceptor:

L+ L- G R+ R-Acceptor

L+ L- G R+ R-Figure 5: Connecting to a Balanced Stereo Audio Figure 6: Connecting to an Unbalanced Stereo Audio Acceptor

# **Connecting to SWT3-31-HU via RS-232**

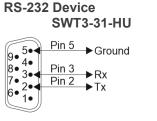

You can connect to **SWT3-31-HU** via an RS-232 connection (13) using, for example, a PC.

**SWT3-31-HU** features an RS-232 3-pin terminal block connector allowing the RS-232 to control **SWT3-31-HU**.

Connect the RS-232 terminal block on the rear panel of **SWT3-31-HU** to a PC/controller, as follows:

From the RS-232 9-pin D-sub serial port connect:

- Pin 2 to the TX pin on the SWT3-31-HU RS-232 terminal block
- Pin 3 to the RX pin on the SWT3-31-HU RS-232 terminal block
- Pin 5 to the G pin on the SWT3-31-HU RS-232 terminal block

# Operating and Controlling SWT3-31-HU

# **Principles of Operation**

This section covers the following topics:

- <u>Coupled or Individual AV+USB Switching</u> on page <u>11</u>.
- <u>Flexible SWT3-31-HU Auto Switching Policy</u> on page <u>11</u>.
- Flexible USB-C Mix of Signals on page 12.
- <u>Online Meeting Systems Integration</u> on page <u>12</u>.
- Routing IP-Driven Control Signals via Built-in Control Gateway on page 13.
- Flexible Remote Buttons Control on page 14.

#### **Coupled or Individual AV+USB Switching**

**SWT3-31-HU** multi-signal switching of any of the inputs to the AV output and connected USB devices, is configurable to use one of the following operation modes:

- USB follows AV coupled routing (1) Selecting an AV input, routes the AV signal to the AV output and connects, in parallel, the input-associated USB host with the connected USB devices.
- USB signal individual routing (1) Selecting an AV input, routes the AV signal to the AV output only. The USB host can be independently selected to connect with the connected USB devices (see Individual USB Host Routing.

See Routing AV and USB Host Signals on page 22.

This is very useful in hybrid sessions, for convenient switching between multiple presenters using either their BYOD laptops and/or connected space PC devices.

### Flexible SWT3-31-HU Auto Switching Policy

Set the switching policy to:

- Manual Select an input manually and switching occurs whether a live signal is present on the input or not.
- Auto Auto Switching selection is performed according to either the Last Connected or the Priority policy.

In Last Connected policy:

- If a signal is plugged in this mode, SWT3-31-HU will switch to it.
- If the signal on the current input is lost, SWT3-31-HU automatically selects the last connected input.

The auto-switching delay depends on the configurable signal-lost timeout

In Priority policy:

- If a signal with a higher priority than the current one is plugged in this mode,
   SWT3-31-HU will switch to it.
- When the input sync signal is lost for any reason, the input with a live signal and next in priority is selected automatically.

The auto-switching delay depends on the configurable signal-lost timeout. Inputs priority is configurable; the default setting is HDMI 1 $\rightarrow$  HDMI 2  $\rightarrow$  HDMI 3  $\rightarrow$  HDMI 4

In both Last Connected and Priority modes, manually selecting an input (using the front panel, remote or web UI input select button) overrides automatic selection

See <u>Setting the Auto-Switching Policy</u> on page <u>23</u>.

#### Flexible USB-C Mix of Signals

AV and USB signals mix, and their data rate level, of the USB-C host port, can be flexibly set to either one of:

- High USB 3.0 data rate and lower 4K60 4:2:0 AV resolution mix, or
- High 4K60 4:4:4 AV resolution and lower USB 2.0 data rate mix

See Setting USB-C Host Port Signals Mix on page 31.

#### **Online Meeting Systems Integration**

USB device ports can be set to auto-disconnect following presenter disconnection, to allow smooth integration and auto-activation of connected online meeting room systems.

See Auto-disconnecting a USB Device on Inactive Host on page 32.

### **Routing IP-Driven Control Signals via Built-in Control Gateway**

Remote IP connected clients can send from the LAN, via the **SWT3-31-HU** built-in control gateway, CEC, RS-232, I/O and IR commands, and receive responses and notifications, to control devices connected to **SWT3-31-HU** HDMI-CEC, RS-232, I/O and IR control ports. The built-in control gateway sends the control commands (converted from the client received IP messages) to the connected controlled devices, and distributes the responses received from the connected controlled devices to all connected clients.

<u>Figure 7</u> shows the **SWT3-31-HU** built-in control gateway connection. The Kramer Control controller is connected to the switcher via LAN, sends IP commands to the switcher control gateway over the LAN connection, to send control messages to, and receive control responses from:

- The touch TV connected to the switcher via the IR and/or HDMI (CEC) ports.
- The PTZ Camera connected to the receiver via the RS-232 port.
- The Occupancy Detector & Select In Button connected to the receiver via the I/O ports.

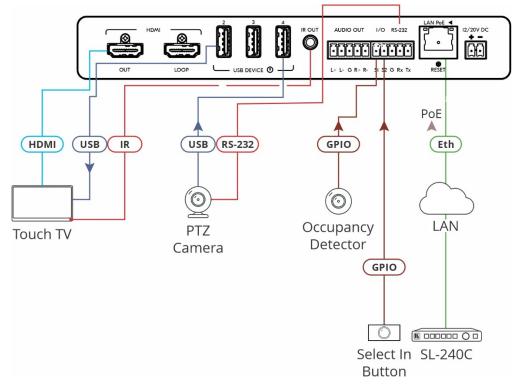

Figure 7: Controlling remotely via Control Gateway

Built-in control gateway activation, activation of the associated control ports and their attributes (such as the CEC logical address of the control gateway), as well as manual commands testing operation, is done via SWT3-31-HU control gateway webpages (see <u>Setting Control Gateway Properties</u> on page <u>34</u>).

### **Flexible Remote Buttons Control**

Remote contact-closure buttons can be connected to the I/O ports, for easy end user control of device functions by button press and release operation. Flexible configuration of button press/release actions and latching (default) or momentary operation mode, enable simple and custom control according to user needs.

(see Configuring Remote Buttons on page 42).

# **Using Front and Rear Panel Buttons**

SWT3-31-HU front and rear panel buttons enable the following actions:

- Selecting an INPUT.
- Turning the display on or off via the DISPLAY ON or sending on or off commands that are configured via the UI (see <u>Defining and Testing Commands via Action Editor</u> on page <u>41</u>).
- Resetting device to its factory settings (for additional instructions on resetting and resetting device (see <u>Resetting and Restarting Device</u> on page <u>28</u>).

# **Operating via Ethernet**

You can connect to SWT3-31-HU via Ethernet using either of the following methods:

- Directly to the PC using a crossover cable (see <u>Connecting Ethernet Port Directly to a</u> <u>PC</u> on page <u>14</u>).
- Via a network switch or router, using a straight-through cable (see <u>Connecting Ethernet</u> <u>Port via a Network Switch</u> on page <u>16</u>).

If you want to connect via a router and your IT system is based on IPv6, speak to your IT department for specific installation instructions.

#### **Connecting Ethernet Port Directly to a PC**

You can connect the Ethernet port of **SWT3-31-HU** directly to the Ethernet port on your PC using a crossover cable with RJ-45 connectors.

This type of connection is recommended for identifying **SWT3-31-HU** with the factory configured default IP address.

After connecting SWT3-31-HU to the Ethernet port, configure your PC as follows:

- 1. Click Start > Control Panel > Network and Sharing Center.
- 2. Click Change Adapter Settings.

3. Highlight the network adapter you want to use to connect to the device and click **Change** settings of this connection.

The Local Area Connection Properties window for the selected network adapter appears as shown in Figure 8.

#### **Connecting Ethernet Port via a Network Switch**

You can connect the Ethernet port of **SWT3-31-HU** to the Ethernet port on a network switch or router using a straight-through cable with RJ-45 connectors.

### **Configuring Ethernet Port**

You can set the Ethernet parameters via the embedded Web pages.

#### **Discovering and acquiring IP address**

**SWT3-31-HU** includes IP address auto-acquiring policy via LAN-connected DHCP server by default. When no DHCP server is detected, a fallback static IP address of 192.168.1.39, and 255.255.255.0 subnet mask (class C), is assigned until an IP address is acquired via the DHCP server.

For more information, refer to Product Page Technical Note in <u>www.kramerav.com/product/SWT3-31-HU</u>.

# **Using Embedded Web Pages**

**SWT3-31-HU** enables you to configure settings via Ethernet using built-in, user-friendly web pages. The Web pages are accessed using a Web browser and an Ethernet connection.

To apply the USB-C type change, device power cycle must be performed.

USB-C ethernet connection is disabled by default and is enabled only by API command. (see <u>Protocol 3000 Commands</u> on page <u>54</u>).

Before attempting to connect:

- Perform the procedure in (see <u>Operating via Ethernet</u> on page <u>14</u>).
- Ensure that your browser is supported.

The following operating systems and Web browsers are supported:

Operating Systems	Browser
Windows 10 and higher	Edge
	Chrome
Мас	Safari
iOS	Safari
Android	N/A

If a web page does not update correctly, clear your Web browser's cache.

**(i)** 

Check that Security/firewalls are not blocking HTTP traffic between the device and the user PC.

To access the web pages:

1. Enter the IP address of the device in the address bar of your internet browser (default = 192.168.1.39).

If security is enabled, the Login window appears.

Figure 14: Navigation pane in Detail

4. Click the Navigation Pane on the left side of the screen to access the relevant web page.

SWT3-31-HU web pages enable performing the following actions:

- <u>Routing Signals</u> on page <u>21</u>.
- <u>Setting AV Properties</u> on page <u>23</u>.
- <u>Setting Device Properties</u> on page <u>27</u>.
- <u>Setting Control Gateway Properties</u> on page <u>34</u>.
- <u>Viewing Device Status</u> on page <u>44</u>.
- <u>Setting Security Properties</u> on page <u>45</u>.
- <u>Viewing the About Page</u> on page <u>49</u>.

# **Routing Signals**

This section details the following actions:

- Routing a Video Input to an Output on page 21.
- Setting Analog Audio Output Level on page 23.

#### **Routing a Video Input to an Output**

When routing any of the inputs to the output, you can set all 3 inputs to route the AV signal together with the USB signal (USB follows video coupled routing) or to independently route each individual signal.

To route the video inputs to the outputs:

1. Go to the Routing Settings page.

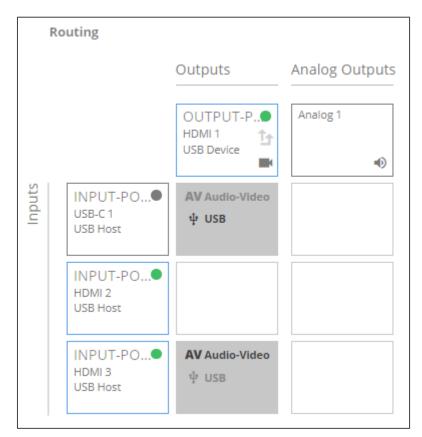

Figure 15: Routing Page

- 2. Perform the following functions:
  - Click an Input/Output cross-point (see <u>Routing AV and USB Host</u> Signals on page <u>22</u>).

A green light on a button indicates a connected source/acceptor.

- Click 1/1 to activate USB following video coupled routing.
- Click to stop/play the video.

An input is routed to the output.

**Routing AV and USB Host Signals** 

**SWT3-31-HU** enables switching any of the inputs to the output in one of the following operation modes:

- USB follows AV coupled routing (1) Selecting an input, routes the HDMI signal to the output and associates the USB devices to that selected USB host.
- USB signal individual routing ( ) Selecting an input, routes the HDMI signal to the output. The USB host can be selected separately from any of the other inputs.

Individual USB Host Routing

In the following example, USB routing does not follow video, so you can individually select the AV signal on input 3 and the USB signal on input 1. This means that the HDMI input 3 AV signal is routed to the output and the USB devices are associated with the USB-C host (Input 1).

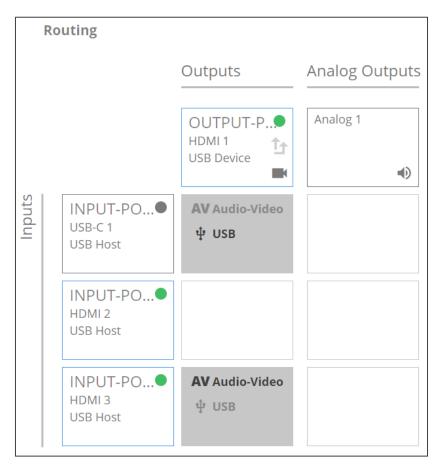

Figure 16: Individual routing of USB Host and AV Signal

## **Setting Analog Audio Output Level**

To set the audio output level:

- 1. Go to the Routing Settings page.
- 2. Under Analog Outputs click
- 3. Set the audio level using the slider next to Analog output volume (dB, from -100 to 15).

Audio level is set.

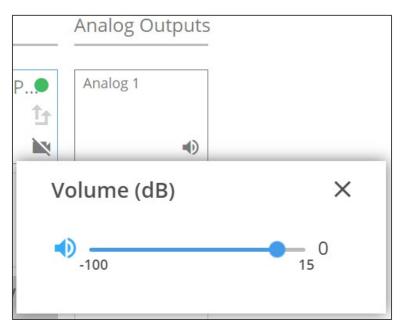

Figure 17: Setting Audio Output Level

Video inputs are routed to the outputs.

# **Setting AV Properties**

This section details the following actions:

- <u>Setting the Auto-Switching Policy</u> on page <u>23</u>.
- <u>Configuring AV Settings</u> on page <u>25</u>.
- <u>Managing EDID</u> on page <u>26</u>.

### **Setting the Auto-Switching Policy**

To set the auto-switching policy:

- 1. Go to the Auto switching page.
- 2. Next to the Selection Mode drop-down box, select the auto switching policy: **Manual**, **Last Connected** or **Priority**.

Switching policy is set.

To change input priorities:

- 1. Go to the Auto switching page.
- 2. Next to the Selection Mode drop-down box, select Priority.
- 3. Click and drag an input between high and low to change the priorities.

Auto switchin	Ig				
VIDEO					
Selection Mode	Priority	•			
High		Low			
HDM USB-C 1	SB-C 1	HDMI 3			
Drag to change the priority.					
CANCEL	SET VIDEO				

Figure 18: Changing Input Priorities

4. Click SET VIDEO.

Input priorities are set.

#### **Configuring AV Settings**

SWT3-31-HU enables configuring the device audio and video settings.

To configure audio and video settings:

1. Go to the Audio Video Settings page. The Audio Video Settings page appears.

Krame	r SWT3-31-HU				
»	Audio Video				
*C	SETTINGS				
		USB-C	HDMI Input 2	HDMI Input 3	HDMI Output 1
AV	Label	INPUT-PORT-1-USBC	INPUT-PORT-2-HDMI	INPUT-PORT-3-HDMI	OUTPUT-PORT-1-HDMI
	HDCP	Yes	Yes	C Yes	<ul> <li>Always On</li> <li>Follow Input</li> </ul>
‡‡	Color Depth Force 8Bits	Disable	Disable	Disable	() Follow input
<u>س</u>	Force LPCM 2CH	Disable	Disable	Disable	
•					
0	Force RGB on Output	Disable			
	Device Auto-Unmute on volume change	Disable			
	Auto Sleep Delay	Enable			
	<b>No input signal</b> Delay output 5V power-off for	900 sec 🔶			
	CANCEL				

Figure 19: Audio Video Settings

- 2. Perform the following actions:
- Label Change the name of an input or the output as it appears on the Routing page and EDID management page.
- HDCP For the inputs, select the Yes (default) /No switch to enable/disable HDCP for that input. For the output, select Always On keep HDCP enabled or Follow Input (default) to define the output HDCP setting according to the active input.
- Color Depth Force 8Bits Enable or Disable (default) on each input.
- Force LPCM 2CH Enable or Disable (default) on each input.
- Force RGB on Output Enable or Disable (default).
- Device Auto-Unmute on volume change When enabled changing the volume will autounmute the audio output.
- Auto Sleep Delay When no input signal is detected, the display automatically goes into sleep mode, and output is set to off. When this setting is enabled (default), it delays sleep mode for an amount of time specified in the next setting.

 No input signal (active when Auto Sleep Delay is enabled) – Set the number of seconds (30 to 60,000 seconds; default = 900 seconds) after there is no signal detected, until the display goes into sleep mode. Click SET TIMEOUT after defining this setting.

Audio and video settings are configured.

#### **Managing EDID**

**SWT3-31-HU** enables you to copy an EDID from one of several different sources to the inputs.

To copy the EDID to the inputs:

1. Go to the EDID Management page.

Ô	kramer	SWT3-31-HU						
»		EDID > EDID Settings						
•1		EDID Settings						
AUTO								
AV		STEP 1: SELECT S	SOURCE

		COPY EDID						

Figure 20: EDID Management Page

- 2. Under Step 1, select the EDID source (the output, any of the inputs, default or custom EDID.
- 3. Under Step 2, select one or more inputs as the destination for copying the EDID.
- 4. Click COPY EDID.

The EDID is copied.

# **Setting Device Properties**

This section details the following actions:

- <u>Device Profile and Maintenance</u> on page <u>27</u>.
- <u>Settings Networking Properties</u> on page <u>30</u>.
- <u>Setting Time and Date</u> on page <u>33</u>.

#### **Device Profile and Maintenance**

**Changing Device Name** 

SWT3-31-HU enables you to change the DNS name of the device.

To change the device name:

1. Go to the Device > General page.

Ø	kramer	SWT3-31-HU			
>>		Device > General			
•4		🔅 General	🖗 Network	ឃុំ USB	Time and Date
AV		Device Name	SWT3-31-H-0000

		Serial Number	0		
<b>‡</b> ‡		Firmware Version	1.0.64477 <u>Update</u>		
ଦ୍ର					
•		GLOBAL SYSTEM SE	TTINGS		
-					
Ŭ		DEVICE RESTART	EXPORT	F FLAG ME	
		FACTORY RESET	IMPORT		
	CAN	CEL SAVE			

Figure 21: Device > General Page

2. Under General Preferences, change the device name and click SAVE.

The device name is changed.

#### **Upgrading Firmware**

Ĭ

To upgrade the device firmware:

- 1. Go to the **Device > General** page (Figure 21).
- 2. Under General, click **Update**, open the relevant firmware file, and follow the instructions. The upgrade takes approximately 30-60 seconds.
- During FW upgrade, the device continues to operate, but the device UI and protocol 3000 communication are inactive. When device restarts, the status LED is lit, and HDMI output signal is disconnected until restart completes.

Firmware is updated.

Firmware Upgrade		
1 Uploading (Firmware) —————	— 2 Upgrading —	3 Restarting

Figure 22: Firmware Upgrade Process

#### **Resetting and Restarting Device**

Two types of resets can be performed:

- Restart Reboots your device and keeps all your device settings, including the IP address and password.
- Reset Reboots your device and restores all factory settings including input/output definitions, switching configuration, IP address and password (a DHCP-acquired IP address is retained).

To restart the device:

Click DEVICE RESTART on the Device > General page (Figure 21).

To perform a factory reset on the device, use one of the following actions:

- Click FACTORY RESET on the Device > General page (Figure 21).
- Using protocol 3000 commands, send FACTORY command then RESET commands.
- On the rear panel, press and hold the RESET button while connecting the power for several seconds.

#### **Exporting and Importing a Configuration File**

**SWT3-31-HU** enables you to export and store (in connected browsing PC storage) a configuration file, that records all current device settings except the routing operation setup. The stored file can then be imported to the same or different **SWT3-31-HU** device to load the recorded settings, for configuration backup and/or solution-replication purposes.

Exporting a Configuration File

To export a configuration file of the current device settings:

- 1. Go to the **Device > General** page (Figure 21).
- 2. Under Global System Settings, click **EXPORT**.
- 3. Select the storage location on your computer to save the configuration file and click **SAVE**.

The configuration file is exported and saved.

#### Importing a Configuration File

To import a configuration file of the current device settings:

- 1. Go to the **Device > General** page (Figure 21).
- 2. Under Global System Settings, click IMPORT.
- 3. Select the relevant configuration file from your computer storage and click **SAVE**.

The configuration file is imported and the device restarts with the settings from the configuration file.

#### **Identifying Your Device**

To identify the device:

- 1. Go to the **Device > General** page (Figure 21).
- 2. Under Global System Settings, click FLAG ME. NET LED flashes.

FLAG ME indication turns off after 60 seconds.

The device is identified by the discovery system.

### **Settings Networking Properties**

By default, DHCP is set to on. The IP address shows the actual IP address acquired from the DHCP server, or the auto-acquired fallback IP address when there is no DHCP server detection.

To configure network settings:

- 1. Go to the **Device > General** page (Figure 21).
- 2. Select the Network tab.

The network page appears.

Device > Network		Device > Network	
🔅 General	🛞 Network	🔅 General	🛞 Network
DHCP	on	DHCP	Off
MAC Address	00-1d-56-09-20-49	MAC Address	00-1d-56-09-20-49
IP Address	192,168, 1, 39	IP Address	192.168.1.39
Mask Address	255_255_255_0	Mask Address	255.255.0.0
Gateway Address	192,168,0,1	Gateway Address	192.168.0.1

Figure 23: Device Settings > Network Page (DHCP On/DHCP Off)

3. Change settings as needed.

If required, Set to **DHCP** (default) or static IP address resolution modes.

- 4. When in Static IP mode, perform the following actions:
  - Change the IP address.
  - Change the Mask address.
  - Change the Gateway address.

Network settings are defined.

Setting USB-C/B Host Port Signals Mix

AV and USB combined signals mix, and their data rate levels, of the USB-C/B host port, can be flexibly set.

To apply the USB-C type change, device power cycle must be performed.

 $(\mathbf{i})$ 

USB-C/B ethernet connection is disabled by default and is enabled only by API command (see <u>Protocol 3000 Commands</u> on page <u>54</u>).

To select USB-C/B host port signals mix:

- 1. Go to the **Device > General** page (Figure 21).
- 2. Select the USB tab.
- 3. Disconnect the USB-C cable from the device.

Q	kramer	SWT3-31-HU
» 		Device > USB
•4		🗘 General 🛞 Network 🕂 USB 🐻 Time and Date
AV		USB-C type USB-C 3.0 USB-C 2.0

<b>\$</b> ₩ #‡		On inactive host
<u>_</u>		Device Port
		1 💶 On
0		2 • On
<u> </u>		3 💽 On
		4 💶 On
		All Off All On

Figure 24: USB Page – USB-C Host Port Data Range Level Selection

- 4. Next to USB-C/B type, select one of the following:
  - USB-C 3.0 High USB 10Gbps data rate and lower 4K60 4:2:0 AV resolution mix.
  - **USB-C 2.0** High 4K60 4:4:4 AV resolution and lower USB 480Mbps data rate mix.
- 5. Before you Click **SAVE** disconnect the USBC cable from the unit. Click SAVE and wait until the web screen re-appears (may take 1 min).
- 6. Power cycle the device, while the **USB-C is still disconnected** from the device.
- 7. After unit power up, verify the new USB setup took place (USB2 or USB3). At that stage you can connect the USB-C cable to the device.

#### Auto-disconnecting a USB Device on Inactive Host

When a host becomes inactive, you can automatically disconnect one or multiple USB devices.

To define auto-disconnection:

- 1. Go to the **Device** > **General** page (Figure 21).
- 2. Select the USB tab.

Q	kramer	SWT3-31-HU			
»		Device > USB			
•4		🏟 General	🛞 Network	ψ USB	🐻 Time and Date
AV ®		USB-C type USB-C	3.0 USB-C 2.0

•		1 On 2 On			
		3 🚺 On			
Ĩ		4 💽 On			
		All Off All On			
		CANCEL	SAVE		

Figure 25: USB Page – USB Device Auto-Disconnection

- 3. For each USB Device Port, set the auto disconnection status to **On** or **Off**. You can also Select **All Off** or **All On** to set all device ports to off or on, respectively.
- 4. Click **SAVE**.

USB devices are set.

#### **Setting Time and Date**

You can sync the device time and date to any server around the world.

To sync device time and date to a server:

- 1. In the Navigation pane, click **Device**. The General tab in the Device page appears.
- 2. Select the **Time and Date** tab. The Time and Date tab appears.

🚫 kramer	SWT3-31-HU			
»	Device > Time and Date			
•4	🔹 General	Network	ឃុំ៖ USB	📆 Time and Date
AV	Date	8/20/2023		
	Time	11:28:13

•	Time Server Address	129 6 15 30		
0	Server Status	🖲 Unreachable 🛛 🗘		
	Sync Every Day at (0-23)	0		
	CANCEL SAVE			

Figure 26: Device Settings – Time and Date Tab

- 3. Set the Date and Time.
- 4. Select the Time Location.
- 5. In the Use Time Server (NTP) drop-down box, click:
  - Disabled to disable the time server.
  - Manual to enable time server (NTP).
- 6. If enabled, type in server information:
  - Enter the time server address.
  - Set sync frequency (every 0 to 23 days).
- 7. Click SAVE for any change.

The devices date and time are synchronized to the server address entered.

# **Setting Control Gateway Properties**

This section details the following actions:

- <u>Setting Serial Port Properties</u> on page <u>34</u>.
- Configuring I/O (GPIO) Ports on page 37.
- <u>Defining and Testing Commands via Action Editor</u> on page <u>41</u>.
- <u>Configuring Remote Buttons</u> on page <u>42</u>.
- Associating CEC Commands to DISPLAY ON/OFF on page 43.

#### **Setting Serial Port Properties**

SWT3-31-HU enables configuring the RS-232 port in one of the following ways:

- <u>Controlling the SWT3-31-HU</u> on page <u>34</u>.
- <u>Controlling an External Device</u> on page <u>35</u>.
- <u>Controlling SWT3-31-HU Connected Display</u> on page <u>36</u>.

Controlling the SWT3-31-HU

To set the RS-232 port to control the device:

1. Go to the Control Gateway page. The Serial Ports tab appears.

🚫 kramer	SWT3-31-HU		
>>	Control gateway > Serial Ports		
-4	🖣 Serial Ports	1010	> Action Editor
AV	SERIAL PORT PROPERT	IES	
	Device Serial Mode	RS-232	
++	Tunneling	Control	Gateway Display ON A
_	Serial configuration		
Ø	Parity	None	*
<b>9</b>	Data Bits	8	-
0	Baud Rate	115200	-
	Stop Bits	1	-

- 2. Next to Tunneling, select **Control**.
- 3. Click SAVE.

RS-232 port controls the SWT3-31-HU.

**Controlling an External Device** 

Control an external device via an IP-connected Controller (for example **SL-240C** that is connected via LAN)

To set the RS-232 port to control an external device:

- 1. Go to the Control Gateway page. The Serial Ports tab appears.
- 2. Next to Tunneling, select Gateway.

Kramer	SWT3-31-HU		
»	Control gateway > Serial Ports		
•6	👎 Serial Ports	10 10	>∃ Action Editor
AV	SERIAL PORT PROPERTIE	S	
	Device Serial Mode	RS-232

Q	Parity	None	<b>*</b>
•	Data Bits	8	-
0	Baud Rate	115200	•
	Stop Bits	1	<b>•</b>

Figure 28: RS-232 as Gateway

- 3. Define the external device RS-232 settings (Parity, Data Bits, Baud Rate and Stop Bits).
- 4. Click Save.

The TUNNELING ADVANCED PROPERTIES screen appears.

TUNNELING ADVANCED PRO	OPERTIES
Protocol	TCP UDP
IP Port	5001 ‡
TCP Keep alive	10 🗘
Send replies to new client by default Bits	On On
CLOSE	

Figure 29: Setting Tunneling Advanced Properties

- 5. Select either TCP or UDP port.
- 6. Click up/down arrows to select IP Port for sending commands to RS-232.
- 7. Click up/down arrows to select desired seconds for TCP Keep alive.
- 8. Press to toggle ON Send replies to new clients by default Bits.
- 9. Click CLOSE.
- 10. Click SAVE.

RS-232 port controls an external device.

Controlling SWT3-31-HU Connected Display

Control an external device (for example a display), connected to SWT3-31-HU.

The **SWT3-31-HU** sends serial, CEC or IT commands, defined by the user in the Action Editor (see <u>Defining and Testing Commands via Action Editor</u> on page <u>41</u>) and then linked to the DISPLAY ON button (see <u>Associating CEC Commands to DISPLAY ON/OFF</u> on page <u>43</u>).

To set the RS-232 port to control an external device:

- 1. Go to the Control Gateway page. The Serial Ports tab appears.
- 2. Next to Tunneling, select **Display ON**.

Control gateway > Serial Ports			
Serial Ports	1 <sub>0</sub> IO	>⊒ Action Editor	O Display On
SERIAL PORT PROPERTIN	ES		
Device Serial Mode	RS-232		
Tunneling	Control G	ateway Display ON Advance

Parity	None	•	
Data Bits	8	•	
Baud Rate	115200	<b>•</b>	
Stop Bits	1	-	

Figure 30: RS-232 Control for Display on/off

- 3. Define the display RS-232 settings (Parity, Data Bits, Baud Rate and Stop Bits).
- 4. Click SAVE.

RS-232 port controls the DISPLAY ON/OFF.

## **Configuring I/O (GPIO) Ports**

The 2 I/O ports can control devices such as sensors, door locks, remote contact-closure buttons, audio volume and lighting control devices and can be configured via the webpages.

To enable I/O operations, Remote Button must be set to Off.

#### To configure an I/O port:

- 1. In the Navigation pane, click **Control Gateway**. The Serial Ports tab in the Device Settings page appears.
- 2. Select the IO tab. The IO tab appears.

Ŧ	Serial Ports	1 <sub>0</sub> 10	>=	Action Editor	0	Display On
<u>IO 1</u> IO 2	IO 1 PROPE	RTIES				
10 2	Remote But	ton 🔵 Off				
	State ON Switch Input	Ŧ	State OFF Display Or	n (via CEC) 🔻	🗌 Mome	ntary
	I/O Type		Analog Input	Digital Input	Digital Output	]
	Pull-up Resis	stor	Enabled			
	Threshold V	DC Range	Low: 800	*	High: 2200	* *
	Read Curre	ent Step: High	Voltage: 3078	mV		

#### Figure 31: I/O Ports Settings Page

- 3. Select the I/O port to be configured (IO 1 or IO 2).
- 4. Select one of the following I/O types:
  - Digital Input (default setting) (see <u>Configuring a Digital Input I/O Type</u> on page <u>38</u>).
  - Digital Output (see <u>Configuring a Digital Output I/O Type</u> on page <u>38</u>).
  - Analog Input (see <u>Configuring an Analog Input I/O Type</u> on page <u>40</u>).

 $\mathbf{(i)}$ 

The settings available on the page change depending on which trigger type is selected.

5. Click **SAVE** after setting the selected I/O type.

Configuring a Digital Input I/O Type

The Digital Input trigger mode reads the digital input of an external sensor device that is connected to the I/O port. It detects High (upon passing Max threshold from Low state) or Low (upon passing Min threshold from High state) port states according to the user defined voltage threshold levels.

To configure a digital input I/O type:

- On the GPIO page, select **Digital Input** next to I/O Type. The Digital Input options appear (<u>Figure 31</u>).
- 2. Select one of the following for the Pull-up resistor setting:
  - Disabled

Suitable, for example, for a high temperature alarm that exceeds the maximum voltage threshold. When the pull-up resistor is disabled, the port state is low and to be triggered it must be pulled high by the externally connected sensor.

- Enabled Detection of an open circuit as High, or a short to ground as Low. This is suitable for example, for a pushbutton switch (connecting one terminal of the switch to ground, and the other to the input) or for an alarm closing a circuit that activates a series of actions. When the pull-up resistor is enabled, the port state is high, and to be triggered it must be pulled low by the externally connected sensor.
- 3. Set the Threshold VDC Low and High Range (threshold voltage at which the port changes state).
- 4. Click **Read** to refresh port status information.
- 5. Click SAVE.

Digital input I/O type is configured.

#### Configuring a Digital Output I/O Type

To configure a digital output I/O type:

1. On the GPIO page, select Digital Output next to I/O type. A warning message appears.

🔥 Warning	
When selecting <b>Digital Output</b> and the pull-up resiste	or is <b>disabled</b> , you must install a current-limiting resistor to prevent damage to the port.
	ОК
	Un

#### Figure 32: Digital Output Warning

2. Make sure to follow the instructions in this warning.

3. Click **OK**. The Digital Output options appear.

Ŧ	Serial Ports	1 <u>0</u> 10	>=	Action Editor	0 D
<u>IO 1</u> IO 2	IO 1 PROPERTI	ES			
	Remote Button	Off			
	State ON None	-	State OFF None	<b>•</b>	Momentary
	I/O Type		Analog Input	Digital Input	Digital Output
	Pull-up Resistor		Disabled		
	Current Status		Low		
	CANCEL				

Figure 33: GPIO Settings Page – Digital Output I/O Type

- 4. Select one of the following for the Pull-up resistor setting:
  - Pullup resistor set to **Enabled**:

The port can be used for controlling devices that accept a TTL signal such as for powering LEDs. The voltage output is TTL positive logic: high: >2.4V; low: < 0.5V. When the pull-up resistor is enabled, the port state is high. For the state to be low, you must select **Low** for the Current Status.

Pullup resistor **Disabled**:

The port is used for controlling external devices such as room or light switches. The external source device determines the voltage output; the maximum voltage is 30V DC and the maximum current is 100mA.

When the pull-up resistor is disabled, the port state is low. For the state to be high, select **High** for the Current Status.

Make sure that the current in this configuration does not exceed 100mA.

#### 5. Click SAVE.

Digital Output I/O type is configured.

Configuring an Analog Input I/O Type

When selecting the Analog Input I/O type, the port is triggered by an external analog device, such as a volume control device. The trigger is activated once when the detected voltage is within the 0 to 30V DC voltage range.

To configure an analog input I/O type:

1. On the GPIO page, select Analog Input next to I/O type.

ili -	Serial Ports	1 <u>0</u> IO	>=	Action Editor	0
<u>IO 1</u> IO 2	IO 1 PROPERT	ES			
	Remote Button	Off			
	State ON None		State OFF None	- I N	Momentary
	I/O Type		Analog Input	Digital Input	Digital Output
	Maximum Repo	rted Steps:	1	*	
I					
	CANCEL			•	

Figure 34: GPIO Port Settings Page Analog Input

- Enter or use the arrows to scroll to a value (1–100) for the Maximum reported steps. This value is the number of steps that the analog input signal is divided into. To calculate the voltage of each step, use the following formula: Voltage of one step = 30V / number of steps.
- 3. Click SAVE.

Analog input I/O type is configured.

### **Defining and Testing Commands via Action Editor**

Use action editor to create and test control commands via CEC, UART or IR control interfaces. You can create up to 5 commands.

To add an action:

- 1. In the navigation pane, select **Control Gateway**. The Serial Ports tab opens.
- 2. Select the Action Editor tab. The Action Editor appears.

Control gateway > Action	Editor		
🖣 Serial Ports	1010	> Action Editor	O Display On
Command_01 Command_02	ACTION PROPERTIE	S	
Command_03 Command_04	Command Name	Command_01	
Custom Cmd 5	Port	CEC	<b>v</b>
	Command		
	450 characters left Syntax (like CEC-SND of RUN COMMAND	command): <port_num>, <cmo< td=""><td>d_id&gt;, <cmd_name>, <len>, <cec_command></cec_command></len></cmd_name></td></cmo<></port_num>	d_id>, <cmd_name>, <len>, <cec_command></cec_command></len></cmd_name>
CANCEL			

Figure 35: Action Editor Tab

- 3. Select a command name on the left side of the window.
- 4. Change the command name, if required.
- 5. Select the port (CEC, UART or IR).
- 6. Enter the appropriate command line, such as one of the following Display On sample commands:
  - For CEC 1,1,tv-on,2,E004

The command to power on a TV can vary depending on the specific TV model and manufacturer. However, above is a common example of a standard command to power on a TV.

- For RS232 PON
- For IR -

1,1,TVON,1,1,1,0000,006f,0022,0002,014d,00a6,0015,0015,0014,0015,0013,0014,00 15,0015,0014,0014,0014,0015,0015,0014,003e,0016,003d,0014,003f,0014,003 e,0015,003f,0013,003f,0014,003e,0015,003f,0013,0016,0013,0015,0014,0015,0013,0 016,0013,003f,0013,003e,0015,0013,003e,0015,003f,0013,003f,0013,003e,001 5,003e,0015,0015,0014,0015,0013,003f,0014,0015,0013,0014,0015,05c9,014d,0053, 0015,0e0a

- 7. Click SAVE.
- 8. Click RUN COMMAND to run the command test.

An action is entered and can be run.

#### **Configuring Remote Buttons**

Remotely operate, by I/O-connected remote buttons, configured control actions (see (see <u>Defining and Testing Commands via Action Editor</u> on page <u>41</u>).

**To Configure Remote Buttons:** 

- 1. In the Navigation pane, click **Control Gateway**. The Serial Ports tab in the Device Settings page appears.
- 2. Select the IO tab. The IO tab appears.
- 3. Press to toggle Remote Button to On.
- 4. Configure defined control actions, for button on/off states, using the **State ON**, **State OFF** drop-down boxes.
  - Button default operation mode is latching. For momentary mode, check the Momentary checkbox.

Ŧ	Serial Ports	1 <u>0</u> 10	>=	Action Editor	0	Display On
<u>IO 1</u> IO 2	IO 1 PROPER	TIES

	Read Curren	t Step: High	Voltage: 3078r	πV		

Figure 36: I/O ports settings tab – Configuring Remote Buttons

5. Click SAVE.

A control actions remote button can now be remotely operated.

## Associating CEC Commands to DISPLAY ON/OFF

Configure CEC commands to send via DISPLAY ON button.

To add an action:

- 1. In the navigation pane, select **Control Gateway**. The Serial Ports tab opens.
- 2. Select the **Display On** tab. The Display ON settings appears.

C	ontrol gateway > Display Or	n		
	🖣 Serial Ports	1010	>∃ Action Editor	O Display On
0	State ON Display On (via CEC) 👻	<sup>State OFF</sup> Display Off (via CEC)	- V Momentary	
	CANCEL	/E		

Figure 37: Action Editor Tab

- 3. Define the State On and State Off commands.
- 4. Check **Momentary** for the button to send a command on the press of a button.
- 5. Click **SAVE**.

DISPLAY ON button is configured.

# **Viewing Device Status**

View the device status.

To view the device status:

- 1. In the navigation pane, select **Status**.
- 2. Select the **Devices** tab. The Devices Status appears.

Q	kramer	SWT3-31-HU

3. View device status.

Device status can be viewed.

# **Setting Security Properties**

This section details the following actions:

- <u>Changing Security Status</u> on page <u>45</u>.
- Defining 802.1X Authentication on page 47.

### **Changing Security Status**

By default, security status is set to On.

#### **Setting Security Status to Off**

To set security status to Off:

- 1. Go to the Security page (Figure 39).
- 2. Select the Security tab. The Security settings appears.

Ø	kramer	SWT3-31-HU		
»		Security > Security		
•4		Security	0 802.1X	
لية AV		SECURITY STATUS	on	
		Current Password		<u>Change</u>

Figure 39: Security – Security Tab

3. Set **SECURITY STATUS** to **Off**. The Security Status window appears.

Security Status Would you like to disa	Security Status Would you like to disable security?			
Enter password to disab	Enter password to disable the security.			
CANCEL	ок			

Figure 40: Security Status Message

- 4. Enter the current password.
- 5. Click OK.

Security status is set to Off.

#### Setting Security Status to On

To set security status to on:

- 1. Go to the Security > Security (Figure 39).
- 2. Set SECURITY STATUS to On.

Security status is set to On.

#### Changing Web Pages Access Password

#### To change the password for accessing the embedded web pages:

- 1. Go to the Security page (Figure 21).
- 2. Select the Security Tab. The Security settings appear (Figure 41).
- 3. Enter the Current Password and click **Change**. The new password settings appear.

SECURITY STATUS	On	
Current Password		<u>Change</u>
New Password		]
Confirm Password		
CANCEL		

Figure 41: Device Settings - Changing the Password

4. Enter the new password and confirmation password and click SAVE.

The password is changed.

### **Defining 802.1X Authentication**

802.1x security standard supports IT networking authentication based on LAN port and MAC address.

To configure security:

- 1. In the Navigation pane, click **Security**. The Security settings tab in the Security page appears.
- 2. Select 802.1X tab. The 802.1X settings tab appears (see Figure 42).

🚫 kramer	SWT3-31-HU	
»	Security > 802.1X	
•t#	Security	0 802.1X
	IEEE 802.1 X AUTHENTICAT	ION 🕕 Off

Figure 42: 802.1X Tab

- 3. For 802.1x authentication, click **ON** to enable 802.1x authentication service. 802.1x supports authentication based on port and MAC address.
- 4. When set to ON check one standard authentication method to set its security attributes.
  - **PEAP-MSCHAP V2 (**Figure 43) Enter:
    - Username up to 24 alphanumeric characters, including "\_" and "-" characters within the username, and
    - · Password up to 24 ASCII characters

	Authentication Method	
<u>*</u> =	EAP-MSCHAP V2	
	Username	
9	Password	
	◯ EAP-TLS	

Figure 44: Security Tab - EAP-MSCHAP V2 Authentication

- **EAP-TLS** (Figure 45) To submit certificate from the server for authentication:
  - Enter Username,
  - Click 1 to upload the certificates and keys.

File format must be pem.

- Enter the private key password (assigned by IT administrator),
- Set Server Certificate On

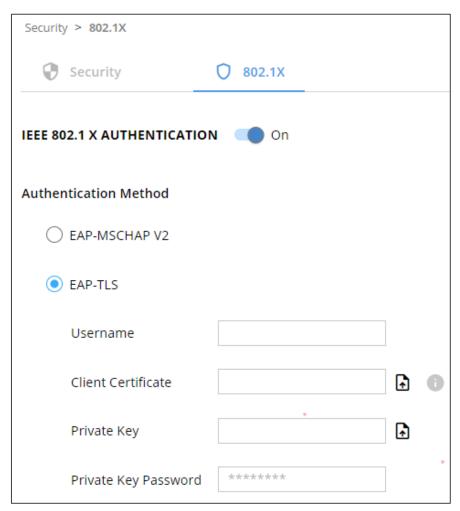

Figure 46: EAP-TLS – Certificates and Password

#### 5. Click APPLY.

802.1x authentication security is configured.

# **Viewing the About Page**

View the firmware version and Kramer Electronics Ltd details in the About page.

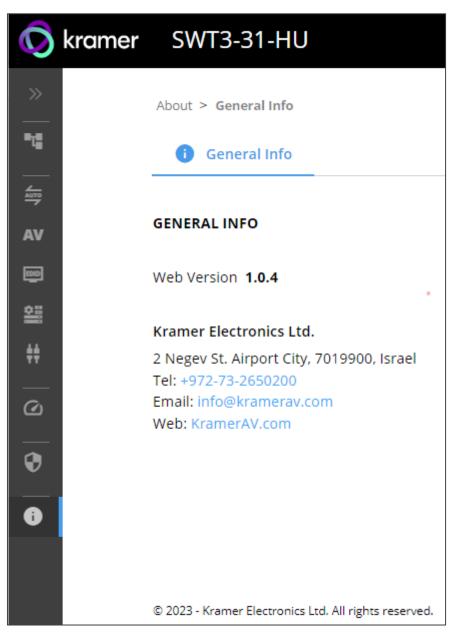

Figure 47: About Page

# **Upgrading Firmware**

Use the Kramer **K-UPLOAD** software to upgrade the firmware via ethernet or the RS-232 port, allowing RS-232 to control/program the device). The device continues to operate and once FW upload complete, you are asked to Restart no or later.

The latest version of **K-UPLOAD** and installation instructions can be downloaded from our website at: <a href="http://www.kramerav.com/support/product\_downloads.asp">www.kramerav.com/support/product\_downloads.asp</a>.

 $(\mathbf{i})$ 

Note that in order to use the micro USB port, you need to install the Kramer USB driver, available at: <a href="http://www.kramerav.com/support/product\_downloads.asp">www.kramerav.com/support/product\_downloads.asp</a>.

# **Technical Specifications**

		r
Inputs	2 HDMI	On HDMI female connectors
	1 DP Alt Mode & PD 3.0 USB-C	On a USB type–C female connector
Outputs	1 HDMI	On an HDMI connector
	1 HDMI Loop	On an HDMI connector
	1 Balanced Stereo Line Level	On a 5-pin terminal block connector
	1 IR	On a 3.5mm mini jack
Ports	1 USB 3.2 Host	On a USB–C female connector
	2 USB 3.2 Host	On USB–B female connectors
	4 USB 3.2 Device	On female USB-A connectors
	1 LAN PoE	On an RJ-45 female connector
	1 RS-232	On a 3-pin terminal block
	2 GPI/O	On 2-pin terminal block connectors
USB Features	USB 3.2 Data Rate	Up to 10Gbps
	Integrated USB Hubs	1
	Standards Compliance	USB 3.2 GEN 2, 2.0 and 1.1
Video	Max Data Rate	18Gbps bandwidth (6Gbps per graphic channel)
	Max Resolution	4K@60Hz (4:4:4) resolution
	Content Protection	HDCP 2.3
	HDMI Support	Deep Color, 3D, HDR as specified in HDMI 2.0b
Analog Audio Output	Impedance Balanced	500Ω
0	THD + Noise: (Non-weighted)	-84dB (0.0065% )
	Crosstalk	<-85dB
	Max Output Signal Level	4.2Vrms
	Coupling	DC
	Impedance Balanced	500Ω
Power	Included Power Adapter	Source: 20V DC, 6A
	(i) For HW Rev 02 and higher,	Consumption: 4.4A
	20V PSU (power supply unit) is included (replacing the 12V PSU).	Max. Power: 84W
	Optional Power Adapter	Source: 12V DC, 2A
		Consumption: 1.8A
		Max. Power: 22W
	LAN PoE	Consumption: 144mA
		Max. Power: 7.8W
	USB Charging	Max. Power: 60W
		i When powered with 20V power supply only
		Compliance: PD 3.0
	USB Device Charging	Max. Total Current: 2A
Controls	Front Panel	INPUT SELECT and DISPLAY ON buttons
Indication LEDs	Front Panel	1 NET LED
		1 STATUS LED
Environmental	Operating Temperature	0° to +40°C (32° to 104°F)

Baud Rate:	115,200		
Data Bits:		8	
Stop Bits:		1	
Parity:		None	
Command Format:		ASCII	
Example (Route video inp	ut 2 to the output):	#ROUTE_1,1,2 <cr></cr>	
Ethernet			
To reset the IP settings to confirm	the factory reset values go to: Menu->Setup ->	> Factory Reset-> press Enter to	
Fallback IP Address:	192.168.1.39		
Fallback Subnet mask:	255.255.255.0		
Fallback gateway:	192.168.0.1		
Default username:	Admin		
Default password:	Admin		
Full Factory Reset			
РЗК	"#FACTORY" command.		
	After receiving "FACTORY OK" perform one of the following to restart the device and complete the procedure:		
	Power cycle		
	Send command "#RESET"		
Embedded webpages	Go to: Device>General and click FACTORY	RESET	

# Protocol 3000

Kramer devices can be operated using Kramer Protocol 3000 commands sent via serial or Ethernet ports.

# **Understanding Protocol 3000**

Protocol 3000 commands are a sequence of ASCII letters, structured according to the following.

#### Command format:

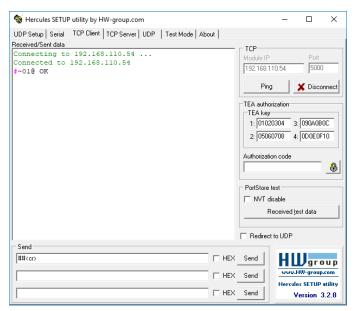

Prefix	Command Name	Constant (Space)	Parameter(s)	Suffix
#	Command	<b>.</b>	Parameter	<cr></cr>

#### • Feedback format:

Prefix	Device ID	Constant	Command Name	Parameter(s)	Suffix
~	nn	Q	Command	Parameter	<cr><lf></lf></cr>

- **Command parameters** Multiple parameters must be separated by a comma (,). In addition, multiple parameters can be grouped as a single parameter using brackets ([ and ]).
- **Command chain separator character** Multiple commands can be chained in the same string. Each command is delimited by a pipe character (|).
- **Parameters attributes** Parameters may contain multiple attributes. Attributes are indicated with pointy brackets (<...>) and must be separated by a period (.).

The command framing varies according to how you interface with **SWT3-31-HU**. The following figure displays how the # command is framed using terminal communication software (such as Hercules):

# **Protocol 3000 Commands**

Function	Description	Syntax	Parameters/Attributes	Example
#	Protocol handshaking.	COMMAND		# <cr></cr>
-	-	# <cr></cr>		
	Validates the	FEEDBACK		
	Protocol 3000 connection and gets	~nn@_ok <cr><lf></lf></cr>		
	the machine number.			
	Step-in master

## **Result and Error Codes**

## **Syntax**

In case of an error, the device responds with an error message. The error message syntax:

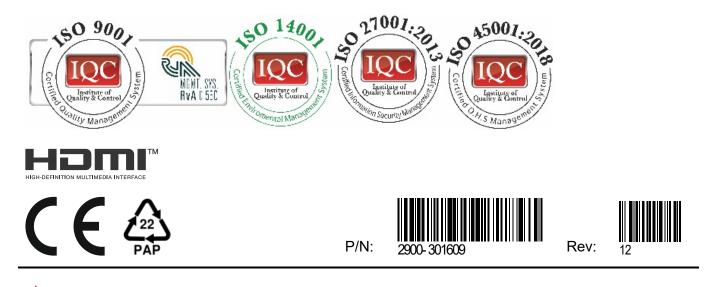

- **~NN@ERR XXX<CR><LF>** when general error, no specific command
- ~NN@CMD ERR XXX<CR><LF> for specific command
- NN machine number of device, default = 01

• XXX – error code

## **Error Codes**

Error Name	Error Code	Description
P3K_NO_ERROR	0	No error
ERR_PROTOCOL_SYNTAX	1	Protocol syntax
ERR_COMMAND_NOT_AVAILABLE	2	Command not available
ERR_PARAMETER_OUT_OF_RANGE	3	Parameter out of range
ERR_UNAUTHORIZED_ACCESS	4	Unauthorized access
ERR_INTERNAL_FW_ERROR	5	Internal FW error
ERR_BUSY	6	Protocol busy
ERR_WRONG_CRC	7	Wrong CRC
ERR_TIMEDOUT	8	Timeout
ERR_RESERVED	9	(Reserved)
ERR_FW_NOT_ENOUGH_SPACE	10	Not enough space for data (firmware, FPGA)
ERR_FS_NOT_ENOUGH_SPACE	11	Not enough space – file system
ERR_FS_FILE_NOT_EXISTS	12	File does not exist
ERR_FS_FILE_CANT_CREATED	13	File can't be created
ERR_FS_FILE_CANT_OPEN	14	File can't open
ERR_FEATURE_NOT_SUPPORTED	15	Feature is not supported
ERR_RESERVED_2	16	(Reserved)
ERR_RESERVED_3	17	(Reserved)
ERR_RESERVED_4	18	(Reserved)
ERR_RESERVED_5	19	(Reserved)
ERR_RESERVED_6	20	(Reserved)
ERR_PACKET_CRC	21	Packet CRC error
ERR_PACKET_MISSED	22	Packet number isn't expected (missing packet)
ERR_PACKET_SIZE	23	Packet size is wrong
ERR_RESERVED_7	24	(Reserved)
ERR_RESERVED_8	25	(Reserved)
ERR_RESERVED_9	26	(Reserved)
ERR_RESERVED_10	27	(Reserved)
ERR_RESERVED_11	28	(Reserved)
ERR_RESERVED_12	29	(Reserved)
ERR_EDID_CORRUPTED	30	EDID corrupted
ERR_NON_LISTED	31	Device specific errors
ERR_SAME_CRC	32	File has the same CRC – not changed
ERR_WRONG_MODE	33	Wrong operation mode
ERR_NOT_CONFIGURED	34	Device/chip was not initialized

SAFETY WARNING Disconnect the unit from the power supply before opening and servicing
